

CODE OF CONDUCT IN RELATION TO ARTIFICIAL INTELLIGENCE

As of: February 2024

We help you to make your supply chain secure and resilient. Our mission is to sustainably improve the way companies manage their supply chains. By combining the latest technologies such as Artificial Intelligence (AI) and Big Data Analytics, we strive to promote transparency, efficiency, and sustainability along the entire supply chain. We are passionate about providing companies with the tools they need to overcome challenges, capitalize on opportunities and build a responsible, future-oriented supply chain. scrioo's ambition is to develop AI solutions that put people at the center.

For us, this means:

1. We attach great importance to ensuring that our AI systems are transparent and explainable. For technology companies, it should be clear who is responsible for training the AI systems, what data is used, and, above all, what factors are included in the algorithms' recommendations. Our proprietary AI models are designed to recognize and assess risks in the supply chain through big data streams. Our data scientists scrutinize each identified risk and data source for relevance and reliability. At scrioo, we rely on seamless collaboration between humans and machines to achieve optimal results.
2. Data is an essential part of any AI system. At scrioo, we stand by our promise to respect people's privacy and rights when handling personal data. Our goal is to ensure that any AI we develop and use is compliant with data protection laws. In doing so, we attach particular importance to compliance with the General Data Protection Regulation (GDPR) and other data protection laws in force at the time. We are committed to using only lawfully obtained and publicly available data within the scope of our data sources.
3. Safety and reliability are of fundamental importance to us. We also apply the same high-quality standards to AI applications. Careful training of learning systems, the application of scientifically validated and recognized algorithms and the use of state-of-the-art technologies are key principles of our daily work.
4. It is crucial that the development, implementation, and application of AI systems are based on principles of fairness to prevent discrimination of any kind. At scrioo, we recognize that AI can lead to bias and disadvantage due to incorrect programming or training. We are therefore actively committed to minimizing these risks with control mechanisms and ensuring that our AI systems are fair and balanced.
5. We work in partnership with various stakeholders and organizations to promote sustainable initiatives in the context of AI. This collaboration includes sharing best practices, joint research efforts and participation in industry initiatives to promote sustainable technology standards. Our partnerships aim to have a positive impact on the development and use of AI technologies for environmental sustainability and to work together on innovative solutions.

scrioo is passionate about helping organizations make their supply chains secure and resilient. The company's mission is to sustainably improve the way companies manage their supply chains by utilizing the latest technologies such as AI and Big Data Analytics. scrioo emphasizes transparency, explainability and fairness in the development and use of its AI systems.
